

**2021 UPDATE**

# NIH'S ROLE IN SUSTAINING THE U.S. ECONOMY

COVID-19 antibody test, [Northwestern University](#)

## Saving Lives and Boosting the Economy

**The National Institutes of Health (NIH)** is the world's premier health research agency, driving life-changing discovery that **enhances health, reduces illness and disability** and **offers hope to people the world-over**.

In addition to improving and saving lives, NIH research also helps fuel our economy. More than 80 percent of NIH's annual budget is awarded through competitive grants to researchers in every state.

In Fiscal Year 2020 (Oct. 1, 2019–Sept. 30, 2020), **the NIH awarded 61,933 grants totaling \$34.65 billion** to researchers in all 50 states and the District of Columbia. This research funding supported **536,338 jobs and drove \$91.35 billion in economic activity**, making the NIH a research and economic powerhouse.

There is no better investment than one that saves lives and fuels the economy.

**536,338** JOBS

**\$91.35** BILLION  
IN ECONOMIC ACTIVITY

Supported by NIH research in FY2020

## Because of NIH Research

- ✓ Babies are born healthier
- ✓ People are living longer
- ✓ Conditions like heart disease, stroke and diabetes are less deadly
- ✓ Infections like HIV/AIDS, hepatitis and meningitis can be successfully prevented and treated
- ✓ More and more people today are cancer survivors

diabetes

heart disease

stroke

cancer

#keepNIHstrong

**NOW, MORE THAN EVER**, we must ensure that the NIH budget continues to grow — ensuring the agency's ability to support the life-changing discovery that also fuels American output, employment and a globally competitive life sciences industry.

## Every State Benefits

**NIH-funded research supports jobs and fuels new economic activity in every state and D.C. — 536,338 jobs and \$91.35 billion last year alone.**

The income generated by these jobs, as well as by the purchase of research-related equipment, services and materials, when cycled through the economy, produces new economic activity.

Washington University School of Medicine in St. Louis

**\$3.6+ billion**

In supplemental funding has been allocated to the NIH since the start of the coronavirus pandemic to support important COVID-19 research on diagnostic tests, vaccines, and treatments.

**In FY2020, this funding supported an additional 563 grants to researchers across the U.S., totaling \$1,925,835,229.**

## NIH and COVID-19

**Today, NIH research is at the very center of the treatments, vaccines and knowledge that will help bring the COVID-19 pandemic to an end, saving lives and enabling our economy to recover.**

- ✓ NIH-funded research — discoveries building on discoveries — forms the basis of the mRNA technology at work in the first two COVID-19 vaccines to receive U.S. Food and Drug Administration emergency use authorization.
- ✓ Experts at the NIH Vaccine Research Center were studying coronaviruses and how to protect against them years before our current pandemic.
- ✓ Two NIH-led initiatives in partnership with industry — ACTIV and RADx — are speeding development of vaccines, treatments and diagnostics for COVID-19.
- ✓ In labs across the country, researchers are exploring the many different angles of this pandemic to not only help us recover but to help improve disease detection and better understand how it spreads — preparing us for the next public health crisis.

## Congressional Commitment to a Strong NIH

**Thanks to bipartisan support** in the House and Senate, strong, annual increases to the NIH budget over the past five years have led to substantial growth in grants for medical research, jobs and economic activity.

### RECENT INCREASES TO THE NIH BUDGET

	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020
Total NIH Appropriations	30.311 billion	32.311 billion	34.300 billion	37.311 billion	39.311 billion	<b>41.636 billion</b>
Total NIH research funds awarded in 50 states + DC	\$22.8 billion	\$24.6 billion	\$26.1 billion	\$28.05 billion	\$30.82 billion	<b>\$34.65 billion</b>
Total number of research grants awarded in 50 states + DC	50,808	52,470	54,128	57,110	59,421	<b>61,993</b>
Total jobs supported nationwide	352,349 jobs	379,471 jobs	402,816 jobs	433,011 jobs	475,905 jobs	<b>536,338 jobs</b>
Total economic activity nationwide	\$60.717 billion	\$64.799 billion	\$68.795 billion	\$73.909 billion	\$81.220 billion	<b>\$91.35 billion</b>

### REVERSING A NEGATIVE TREND

For FY2016, Congress provided the NIH its first significant budget increase in 12 years, beginning the process of putting the agency back on an upward path after years of stagnant funding. Between 2004 and 2015, the NIH budget, adjusted for inflation, fell **22%**.

Source: NIH

### COMPARED TO FY2015, INCREASES IN THE NIH BUDGET IN FY2020 RESULTED IN

**\$11.85B**  
MORE GRANT FUNDING TO RESEARCHERS

**\$30.6B**  
MORE ECONOMIC ACTIVITY

**183,989**  
MORE JOBS

#keepNIHstrong | THANK YOU CONGRESS!

**A note about this data:** Since 2011, UMR has provided an analysis of the employment and economic activity attributable to NIH extramural research spending. We rely on the RIMS II model maintained by the Bureau of Economic Analysis, which is part of the U.S. Department of Commerce. This model was last updated by BEA in December 2016. This 2021 update, and each of the previous analyses, was conducted by Dr. Everett Ehrlich of ESC Company.
