Why Invest in NIH?

By ensuring steady and sustainable annual increases to the budget for the National Institutes of Health, Congress can continue to fund breakthroughs in medical research. Investors who support NIH believe that when we make the investment in health research, it makes sense to secure a sustainable future for biomedical innovation.

When we invest in NIH, we are investing in the knowledge and discovery that will help to improve health and reduce disease and are investing in you — people who will gain from these discoveries.

Moving forward, we will build on the strong history of rising federal investment in the National Institutes of Health (NIH) that has sustained the advances in medical research and health care throughout our history.

The NIH has helped to build the body of knowledge in research and development and health, and has put in place a broad network of universities and generation of scientists focused on ensuring the health of our nation.

The NIH supports work in a range of fields, from cancer to neuroscience, with a goal of translating research into clinical practice and promoting the next generation of scientists.

It helps to build the body of knowledge in research and development and health, and has put in place a broad network of universities and generation of scientists focused on ensuring the health of our nation.

The NIH supports work in a range of fields, from cancer to neuroscience, with a goal of translating research into clinical practice and promoting the next generation of scientists.

Here are some other reasons why Congress must act to support NIH:

- **By ensuring steady and sustainable annual increases to the NIH budget, Congress can continue to fund breakthroughs in medical research.**
- **Investors who support NIH believe that when we make the investment in health research, it makes sense to secure a sustainable future for biomedical innovation.**
- **Moving forward, we will build on the strong history of rising federal investment in the National Institutes of Health (NIH) that has sustained the advances in medical research and health care throughout our history.**
- **The NIH has helped to build the body of knowledge in research and development and health, and has put in place a broad network of universities and generation of scientists focused on ensuring the health of our nation.**
- **The NIH supports work in a range of fields, from cancer to neuroscience, with a goal of translating research into clinical practice and promoting the next generation of scientists.**

**Anthony J. Baucum II, PhD**

Professor of Biology and Neuroscience

Washington University in St. Louis

**Savannah Barch, PhD**

Associate Professor of Psychology and Psychiatry.

Washington University in St. Louis

**Sadia Khan, MD, MSc**

Assistant Professor of Medicine & Epidemiology

University of Wisconsin-Madison

**Adam Berger**

NIH-funded scientist

University of Maryland

**Bonnielin Swanor, PhD, MPH**

Assistant Professor of Medicine

University of Washington

**Debina Sarkar, PhD**

Consulting Professor of Pathology

Vanderbilt University

**Nicole Putnam, PhD**

Assistant Professor of Medicine

Vanderbilt University

**Brad Grueter, PhD**

Assistant Professor of Biology

Washington University in St. Louis
