UNITED FOR
MEDICAL RESEARCH

## There Is No Better Investment than One that Saves Lives and Fuels the Economy

#### Abstract

When Congress invests in the National Institutes of Health (NIH), lives are saved, jobs are created and families and local economies across the country benefit. Each year more than 80 percent of the NIH budget is awarded to researchers pursuing all aspects of biomedical science and innovation.

Even before discoveries are made, NIH research grants are supporting local jobs and economic activity.

AN
EXPONENTIAL RETURN ON

아옹 $\$ 2.46$
ECONOMIC ACTIVITY

## Every research dollar that leaves NIH does double duty.

In Fiscal Year 2023, the $\$ 37.81$ billion NIH awarded to researchers in the 50 U.S. states and the District of Columbia supported 412,041 jobs and $\$ 92.89$ billion in economic activity.

UNDERSTANDINGRESEARCH TYPES

## Intramural

Research
Intramural research
is conducted by about 6,000 researchers in NIH's own laboratories. Only about 11 percent of the NIH budget is spent on intramural research.

## Extramural

 ResearchExtramural research is done by scientists outside of the NIH who have been awarded NIH research grants. More than 80 percent of the NIH budget is spent on extramural research.

## Basic Research

(aka Foundational Research, Basic Science) Basic research is the foundation of medical discovery. Through it we gain greater understanding of living systems and life processes, leading to better ways to predict, prevent, diagnose and treat disease. Just over half of NIH's budget goes toward basic science.

## Clinical Research

Clinical research refers to studies conducted in collaboration with human beings, undertaken to improve human health. It includes clinical trials. The NIH Clinical Center is the world's largest hospital entirely devoted to clinical research.

## Applied Research

Applied research is designed to solve specific practical problems or answer certain questions. It involves applying existing knowledge, much of which is obtained through basic research, to a specific biomedical problem. Just under half of NIH's budget goes toward applied research.

## Translational Research

Translational research is the process of applying ideas and discoveries generated through basic scientific inquiry to the treatment or prevention of human disease - taking research from the 'bench to the bedside.' The National Center for Advancing Translational Sciences (NCATS) at NIH focuses on how to get more treatments to more patients more quickly.

## Every State Benefits

NIH-funded research is conducted in every U.S. state and the District of Columbia. As NIH funding is awarded to researchers in individual states, that funding supports employment and the purchase of research-related goods, services and materials. The income generated from

Across the U.S., minority and rural populations are often underrepresented in clinical trials and don't benefit from access to the treatments that are part of the research study. A new NIH-funded clinical trials resource center at West Virginia University aims to change this.

The five-year grant awarded in 2023 to WVU's Dr. Sally Hodder, director of the West Virginia Clinical and Translational Science Institute (WVCTSI), will fund the IDeA State Consortium for Clinical Research Resource Center. The ISCORE-RC will provide training and other resources to help institutions in IDeA states increase numbers of clinical trials and observational cohort studies and thereby increase trial availability and participation of minority and rural populations. The NIH IDeA program works to broaden research capacity and excellence in states with fewer biomedical research institutions.

## A Critical National Priority

For the past eight years, Congress has made funding medical
research through the NIH a critical national priority. From
FY2O15 through FY2O23, the NIH budget grew by more than \$17 billion, helping the agency to catch up from a long period of flat funding and restore lost purchasing power.

COMPARED TO
2015, NIH RESEARCH
FUNDING IN 2023 RESULTED IN:

MORE GRANTS AWARDED

The National Institutes of Health is a catalyst for innovation and economic growth and a source of hope to patients and families affected by disease. Failure to robustly fund the NIH now will have a negative impact on U.S. leadership in biomedical research and innovation and the benefits that has on our health and economy.

A note about this data: UMR's analysis of the employment and economic activity attributable to NIH extramural research spending in the 50 U.S. states and the District of Columbia, relies on the RIMS II model maintained by the Bureau of Economic Analysis, part of the U.S. Department of Commerce. While RIMS parameters are updated each year, they lag by two years. Therefore this 2023 update and fiscal years 2022 and 2021 were calculated with the latest available RIMS parameters, which are for 2021. Updated calculations for fiscal years 2015-2020 use estimates of annual RIMS parameters where these parameters are interpolated based on published values for 2013 and 2021. The analysis for this 2023 update was performed by Ronald Horst, Ph.D., Inforum.

## RESEARCH HIGHLIGHT

## Helping People with Down Syndrome Recover from Bone Fractures

Individuals with Down syndrome typically have poor bone health and are more prone to fractures. A new NIH-funded study at Texas A\&M University will help scientists understand whether bone regeneration holds the key to helping people with Down syndrome recover from fractures.

The grant is part of the INCLUDE (INvestigation of Co-occurring conditions across the Lifespan to Understand Down syndromE) Project, a trans-NIH research initiative on critical health and quality-of-life needs for individuals with Down syndrome. In addition to helping people with Down syndrome, findings from the new project will also aid treatment development for people with limb loss, which affects more than two million people in the United States.

## Economic Impact of NIH Research by State FY2023

| State | NIH AWARDS (\$M) | Jobs Created per \$1M NIH Awards | Intrastate Jobs | Added Interstate Activity (\%) | Interstate Jobs | TOTAL EMPLOYMENT | ECONOMIC ACTIVITY (\$M) |
